

Masters MONETARY AND FINANCIAL ECONOMICS

The Masters in Monetary and Financial Economics (MFE) is intended to complement and build on a Bachelors degree in Economics, Finance, Quantitative Methods, or Management.

Presentation:

The MSc in MFE is an international-level degree that follows the best European practices in this area. As such, the selection criteria for applicants are demanding and this same level of demand is maintained throughout the course. The MSc in MFE is therefore not suitable for students with limited knowledge in monetary and financial economics and those who are not prepared to work hard, as we expect students to invest in a minimum of 3,200 study hours over the 2 years. This effort by MFE students is strongly recognised in the job market.

The aims of the Masters are to:

- > provide an advanced knowledge of the monetary and financial fields, which is based upon the most relevant results that have been achieved by the scientific community;
- > initiate students in scientific research, by practicing the appropriate techniques and methodologies;
- > prepare future senior staff of monetary and financial institutions that are linked to financing the economy and to deciding monetary policies.

Potential employers especially recognise MFE graduates as having a strong background in econometrics and quantitative methods, with excellent competence in macroeconomics and monetary economics, together with a good capacity to face new challenges.

All the compulsory and elective option course units originating from this Masters are taught in English, whereas course units that originate from other Masters are taught in the designated language for that particular degree.

The "Training Positions MFE – Bank of Portugal" programme provides the opportunity to work as a trainee in the Economic Research Department of Bank of Portugal to the best students in the MSc. The main goal is to produce a dissertation supervised by a doctor in the department.

This Masters provides direct access to the Doctoral programme in Economics at ISEG.

Start Date:
September

Duration:
2 years

Schedule:
Evening Classes

Fees
Students from UE: €5.750
Students outside UE: €6.250
